UPI Transaction Investigation Report

Case ID: UPI-SIMRAN-MALHOTRA-042625

Date of Report: 2025-04-26 (Assuming report generated on the date of first flagged transaction or shortly thereafter)

Investigating Officer: [Your Name/ID - as a Senior Banking Investigation Officer]

1. Case Summary

This report details an investigation into the UPI transaction activity of customer Simran Malhotra, age 37, holding account 57871331509 with IndusInd Bank, Bhopal MG Road Branch. Two transactions have been flagged for anomalies, with one transaction (TXN063) exhibiting multiple high-risk indicators suggesting potential unauthorized activity or account compromise. The customer's registered device is DEV96374 and registered IP is 10.0.106.120.

2. Data Analyzed

The following data points were thoroughly examined for this investigation:

Customer Profile: Name, Age, UPI ID (simran53@okicici), Bank, Account Number, IFSC, Branch, Phone Number (9528414718), Registered Device (DEV96374), Registered IP (10.0.106.120), Account Balance (Rs. 464,812.18), Total Transactions (396), Account Opened Date (2022-09-09).

Flagged Transaction Data: Detailed information for two flagged UPI transactions (TXN063 and TXN076), including:

Transaction ID

Amount

Merchant/Payee

Timestamp

Transaction Location

Device ID used for transaction

IP Address used for transaction

System-assigned Risk Score

Specific Anomalies Detected and their severity.

3. Detected Inconsistencies

Two transactions were flagged by the bank's fraud detection system:

3.1. Flagged Transaction 1 ? TXN063

Transaction Details: Amount: Rs. 84,193.01 | Merchant: PhonePe Merchant | Time: 2025-04-26 10:41:25 | Location: Patna | Device: DEV61773 | IP: 10.0.8.98 | Risk Score: 10/10

Anomalies Detected and Explanations:

[HIGH] DEVICE_MISMATCH: The transaction was initiated from device 'DEV61773', which is different from the customer's registered device 'DEV96374'. This is a critical indicator, suggesting either the customer is using an unregistered device or, more concerningly, unauthorized access to the account.

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.8.98', which is different from the customer's registered IP '10.0.106.120'. While IP addresses can change (e.g., due to different Wi-Fi networks, mobile data, or VPN usage), in conjunction with a device mismatch, it strengthens the suspicion of unusual activity.

[HIGH] HIGH_AMOUNT: The transaction amount of Rs. 84,193.01 significantly exceeds the internal threshold of Rs. 50,000 for high-value transactions. Such a large, single payment to a generic "PhonePe Merchant" warrants immediate scrutiny, especially without a clear context or prior history of similar large transactions.

ClearTrace Investigation Report

Generated: 2026-03-22 12:04:52

[MEDIUM] LOCATION_MISMATCH: The transaction occurred in 'Patna', while the customer's registered branch and presumed primary location is 'Bhopal'. Although customers can travel, the combination of a new device, new IP, and a high-value transaction from a distant city increases suspicion.

3.2. Flagged Transaction 2 ? TXN076

Transaction Details: Amount: Rs. 10,983.59 | Merchant: MakeMyTrip | Time: 2025-06-25 05:10:00 | Location: Bhopal | Device: DEV96374 | IP: 10.0.127.226 | Risk Score: 2/10

Anomalies Detected and Explanations:

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.127.226', which differs from the customer's registered IP '10.0.106.120'. This is a common occurrence and, in isolation, carries a lower risk. It could simply be due to the customer using a different Wi-Fi network or a dynamic IP provided by their mobile service provider.

Note: Crucially, the device used for this transaction ('DEV96374') matches the customer's registered device, and the transaction location ('Bhopal') aligns with the customer's branch. The merchant ('MakeMyTrip') is a legitimate travel platform.

4. Risk Assessment

Overall Risk Level: HIGH

The overall risk level for Simran Malhotra's account is assessed as HIGH. This is primarily driven by Transaction TXN063, which presents a severe combination of high-risk indicators: a high-value payment (Rs. 84,193.01) initiated from an unregistered device (DEV61773), an unfamiliar IP address, and a geographically distant location (Patna) from the customer's registered branch. This pattern is highly indicative of potential fraud, such as account takeover, phishing scam, or remote access fraud.

While Transaction TXN076 has a low risk score (2/10) and is likely legitimate given the matching device and known merchant, the presence of TXN063 necessitates immediate attention and elevates the overall risk posture of the customer's account.

5. Investigation Outcome

REQUIRES_FURTHER_REVIEW

6. Recommended Actions

Based on the analysis, the following actions are recommended:

1. Immediate Customer Contact: Contact Simran Malhotra via her registered mobile number (9528414718) without delay to verify the legitimacy of TXN063 (Rs. 84,193.01 to PhonePe Merchant on 2025-04-26).
2. Account Monitoring: Place customer account 57871331509 under enhanced fraud monitoring to track any further unusual or high-risk transactions.
3. Temporary Freeze (Conditional):

If the customer confirms TXN063 as fraudulent or if contact cannot be established within a reasonable timeframe, immediately place a temporary freeze on all outgoing transactions from the account. Allow incoming credits.

If the customer confirms TXN063 as legitimate, advise her to register the new device (DEV61773) and update her registered IP if it is a frequently used location/network.

4. Educate Customer: If contact is made, politely remind Simran Malhotra about best practices for UPI security, including:

Not sharing OTPs or UPI PINs with anyone.

Being cautious of unsolicited calls/messages asking for account details or remote access.

Reporting any suspicious activity immediately.

5. Internal Review: Review other recent transaction history for Simran Malhotra (beyond the provided 5) for any

ClearTrace Investigation Report

Generated: 2026-03-22 12:04:52

additional high-value or out-of-pattern transactions that might have been missed by the automated system.

7. Reasoning

The decision of "REQUIRES_FURTHER_REVIEW" leaning heavily towards suspicious activity is justified primarily by the characteristics of TXN063:

Convergence of High-Risk Indicators: The simultaneous occurrence of a HIGH-risk DEVICE_MISMATCH, HIGH_AMOUNT, and MEDIUM-risk IP_MISMATCH and LOCATION_MISMATCH for TXN063 is highly alarming. A device mismatch is one of the strongest indicators of potential account takeover or the customer falling victim to a remote access scam, where fraudsters gain control of the account via an unregistered device.

High Value Transaction: The amount of Rs. 84,193.01 is substantial and would significantly impact the customer's balance. Such a large, instant payment via UPI to a generic "PhonePe Merchant" (which can be a payment gateway for various entities, legitimate or otherwise) without prior history or explanation demands immediate verification.

Geographic Discrepancy: While travel is common, the transaction originating from Patna, coupled with a new device and IP, increases the likelihood of unauthorized access rather than legitimate travel activity, especially for a high-value transaction.

Contrast with TXN076: The lower risk of TXN076 (Made to MakeMyTrip, with matching registered device) serves to highlight the severity of TXN063. The customer appears to be making legitimate transactions from her registered device, making TXN063's deviation even more suspicious.

Given these factors, it is imperative to directly contact Simran Malhotra to ascertain the legitimacy of TXN063. Until positive confirmation is received, the bank must consider this transaction potentially fraudulent and take proactive steps to protect the customer's funds.
