Case Information

Case ID: INV-EBCD03C5
Investigation Date: 2026-03-22
Risk Level:

CRITICAL

Customer Profile

Name: Simran Malhotra
Age: 37
UPI ID: simran53@okicici
Bank: IndusInd Bank
Account Number: 57871331509
IFSC Code: INDB0199
Branch: Bhopal MG Road Branch
Phone: 9528414718
Account Balance: Rs. 464,812.18
Account Opened: 2022-09-09

Transaction Analysis

Total transactions analyzed: 5
Anomalous transactions flagged: 2

Detected Anomalies

Transaction #1: TXN063

Amount: Rs. 84,193.01
Merchant: PhonePe Merchant
Time: 2025-04-26 10:41:25
Location: Patna
Risk Score: 10/10

[HIGH] DEVICE_MISMATCH: Transaction device 'DEV61773' differs from registered device 'DEV96374'
[MEDIUM] IP_MISMATCH: Transaction IP '10.0.8.98' differs from registered IP '10.0.106.120'

UPI Transaction Investigation Report

Report ID: UPI-INV-SIMRAN-20250625-001

Date: 2025-06-26

Investigating Officer: [Your Name/Officer ID], Senior Banking Investigation Officer

1. Case Summary

This report details the investigation of two flagged UPI transactions associated with customer Simran Malhotra (UPI ID: simran53@okicici) from IndusInd Bank, Bhopal MG Road Branch. The automated fraud detection system flagged these transactions due to multiple inconsistencies. One transaction (TXN063) presents a severe risk profile with high-value, device/IP/location mismatches, indicating a strong possibility of unauthorized access or account takeover. The second transaction (TXN076) shows a lower risk but warrants verification in light of the first.

2. Data Analyzed

The following data points were thoroughly examined:

Customer Profile: Name (Simran Malhotra), Age (37), UPI ID (simran53@okicici), Bank (IndusInd Bank), Account Number (57871331509), IFSC (INDB0199), Branch (Bhopal MG Road Branch), Phone Number (9528414718), Registered Device (DEV96374), Registered IP (10.0.106.120), Account Balance (Rs. 464,812.18), Total Transactions (396), Account Opening Date (2022-09-09).

Flagged Transaction 1 (TXN063): Amount (Rs. 84,193.01), Merchant (PhonePe Merchant), Time (2025-04-26 10:41:25), Location (Patna), Device (DEV61773), IP (10.0.8.98), Risk Score (10/10), Anomalies Detected.

Flagged Transaction 2 (TXN076): Amount (Rs. 10,983.59), Merchant (MakeMyTrip), Time (2025-06-25 05:10:00), Location (Bhopal), Device (DEV96374), IP (10.0.127.226), Risk Score (2/10), Anomalies Detected.

3. Detected Inconsistencies

Transaction 1 (TXN063):

[HIGH] DEVICE_MISMATCH: The transaction was initiated from device 'DEV61773', which significantly differs from the customer's registered device 'DEV96374'. This is a critical indicator of potential unauthorized access or account compromise, as it suggests the transaction was not performed from Simran Malhotra's usual, registered mobile device.

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.8.98', which is different from the customer's registered IP address '10.0.106.120'. While IP addresses can change, this mismatch, in conjunction with the device mismatch, further strengthens the suspicion of an external party.

[HIGH] HIGH_AMOUNT: The transaction amount of Rs. 84,193.01 significantly exceeds the predefined high-value threshold of Rs. 50,000. Such a large outgoing transaction, especially when accompanied by other high-severity flags, raises significant concern for potential fraud.

[MEDIUM] LOCATION_MISMATCH: The transaction was processed in 'Patna', which is geographically distant from the customer's registered branch location in 'Bhopal'. While travel is common, the combination of location mismatch with device and IP mismatch strongly points towards a non-customer initiated transaction.

Transaction 2 (TXN076):

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.127.226', differing from the customer's registered IP address '10.0.106.120'. However, unlike TXN063, the transaction was initiated from the customer's registered device 'DEV96374' and occurred in 'Bhopal', matching the customer's branch location. An IP mismatch on its own, especially with a matching device and location, is a common occurrence due to dynamic IP allocation by ISPs or switching between Wi-Fi/mobile data networks and is typically a lower risk factor.

4. Risk Assessment

Overall Risk Level: HIGH

Justification: The primary driver for this high-risk assessment is Transaction TXN063. The simultaneous occurrence of a device mismatch, IP mismatch, significant location mismatch (Patna vs. Bhopal), and a high transaction amount (Rs. 84,193.01) constitutes a highly suspicious pattern. This combination is a strong indicator of potential account takeover, phishing scam, or malware infection leading to unauthorized fund transfer. The transaction's risk score of 10/10 accurately reflects this severe threat.

While TXN076 carries a lower individual risk due to the use of the registered device and matching location, its proximity to a highly suspicious transaction warrants caution and verification. It could either be a legitimate transaction by the customer or potentially an attempt by a fraudster to test the account or make a smaller, less noticeable transaction after a previous compromise.

5. Investigation Outcome

SUSPICIOUS

6. Recommended Actions

1. Immediate Account Restriction: Temporarily block/freeze all outgoing UPI transactions for `simran53@okicici` and place a temporary debit freeze on account `57871331509` to prevent further potential unauthorized activity.
2. Customer Contact: Immediately attempt to contact Simran Malhotra via her registered phone number (9528414718) to verify both TXN063 and TXN076.

If TXN063 is confirmed unauthorized: Advise the customer to immediately change their UPI PIN, online banking password, and check their device for any suspicious applications or malware. Initiate a fraud report and start the chargeback process with PhonePe/Acquiring bank for the amount Rs. 84,193.01.

If TXN076 is also confirmed unauthorized: Proceed with fraud reporting and necessary actions for MakeMyTrip.

If both transactions are confirmed legitimate by the customer: Lift the restrictions and advise caution regarding sharing credentials.

3. Internal Escalation: Escalate the case to the bank's Cyber Security and Fraud Prevention Unit for deeper analysis of the foreign device ID (DEV61773) and IP addresses involved (10.0.8.98, 10.0.127.226) for potential links to known fraud rings or patterns.

4. Account Monitoring: Place the customer's account under enhanced monitoring for the next 30-60 days for any unusual patterns or further suspicious activities, even if transactions are confirmed legitimate.

5. Customer Awareness: If fraud is confirmed, educate the customer on common social engineering tactics, phishing scams, and safe UPI practices.

7. Reasoning

The decision to classify this case as SUSPICIOUS is based primarily on the overwhelming evidence presented by Transaction TXN063. The simultaneous deviation across multiple critical security parameters (device, IP, location) for a high-value transaction (Rs. 84,193.01) from a generic merchant ("PhonePe Merchant") is highly indicative of an account compromise or unauthorized activity rather than a legitimate customer transaction. A user typically uses their registered device and is unlikely to make such a significant payment from a completely different device and location without prior notification or unusual circumstances.

While Transaction TXN076 has a lower risk score and a legitimate merchant (MakeMyTrip), the IP mismatch, even with a matching device and location, cannot be entirely disregarded, especially when a high-risk transaction has already occurred. It is crucial to verify this transaction with the customer as well, to confirm its legitimacy and rule out any broader compromise of the customer's environment.

Given the severity of TXN063, immediate action is required to protect the customer's funds and mitigate further potential

losses. The combination of anomalies points strongly towards a fraudulent event that needs urgent intervention and thorough investigation.
