Case Information

Case ID: INV-EBCD03C5
Investigation Date: 2026-03-22
Risk Level:

CRITICAL

Customer Profile

Name: Simran Malhotra
Age: 37
UPI ID: simran53@okicici
Bank: IndusInd Bank
Account Number: 57871331509
IFSC Code: INDB0199
Branch: Bhopal MG Road Branch
Phone: 9528414718
Account Balance: Rs. 464,812.18
Account Opened: 2022-09-09

Transaction Analysis

Total transactions analyzed: 5
Anomalous transactions flagged: 2

Detected Anomalies

Transaction #1: TXN063

Amount: Rs. 84,193.01
Merchant: PhonePe Merchant
Time: 2025-04-26 10:41:25
Location: Patna
Risk Score: 10/10

[HIGH] DEVICE_MISMATCH: Transaction device 'DEV61773' differs from registered device 'DEV96374'
[MEDIUM] IP_MISMATCH: Transaction IP '10.0.8.98' differs from registered IP '10.0.106.120'

Investigation Report: Flagged UPI Transaction Case ? Simran Malhotra

Report Date: 2025-04-27 (assuming current date for report generation after TXN063)

1. Case Summary

This report details an investigation into two flagged UPI transactions associated with customer Simran Malhotra, aged 37, holding account 57871331509 at IndusInd Bank, Bhopal MG Road Branch. The customer's UPI ID is simran53@okicici. Of particular concern is Transaction 1 (TXN063) for Rs. 84,193.01, which exhibits multiple high-severity anomalies including device, IP, and location mismatches, coupled with a high transaction amount. Transaction 2 (TXN076) shows a less severe IP mismatch. The primary objective is to assess the legitimacy of these transactions and identify potential fraudulent activity.

2. Data Analyzed

The investigation was conducted based on the following data points:

Customer Profile: Name, Age, UPI ID, Bank, Account Number, IFSC, Branch, Phone Number, Registered Device (DEV96374), Registered IP (10.0.106.120), Account Balance, Total Transactions, and Account Opening Date.

Transaction Summary: Acknowledgment that 5 transactions were analyzed, with 2 identified as flagged.

Flagged Transaction Details: For each flagged transaction (TXN063 and TXN076): Transaction Amount, Merchant, Time, Location, Device used, IP address used, System-generated Risk Score, and specific Anomalies Detected with their severity levels.

3. Detected Inconsistencies

A. Flagged Transaction 1 ? TXN063

Transaction Details:

Amount: Rs. 84,193.01

Merchant: PhonePe Merchant

Time: 2025-04-26 10:41:25

Location: Patna

Device: DEV61773

IP: 10.0.8.98

Risk Score: 10/10

Anomalies Detected and Explanation:

[HIGH] DEVICE_MISMATCH: The transaction was initiated using device 'DEV61773', which is entirely different from Simran Malhotra's registered device 'DEV96374'. This is a critical indicator of potential unauthorized access or a compromised device.

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.8.98', which is inconsistent with the customer's registered IP '10.0.106.120'. While IP addresses can vary, this deviation, especially when combined with other anomalies, elevates suspicion.

[HIGH] HIGH_AMOUNT: The transaction amount of Rs. 84,193.01 significantly exceeds the internal threshold of Rs. 50,000 for UPI transactions. This represents a substantial single debit from the customer's account balance of Rs. 464,812.18, further raising concerns.

[MEDIUM] LOCATION_MISMATCH: The transaction took place in 'Patna', a location geographically distant and inconsistent with the customer's registered branch in 'Bhopal'. This suggests that either the customer was in an unusual location or the transaction was initiated by an unauthorized party from a different region.

B. Flagged Transaction 2 ? TXN076

Transaction Details:

Amount: Rs. 10,983.59

Merchant: MakeMyTrip

Time: 2025-06-25 05:10:00

Location: Bhopal

Device: DEV96374

IP: 10.0.127.226

Risk Score: 2/10

Anomalies Detected and Explanation:

[MEDIUM] IP_MISMATCH: The transaction was initiated from IP '10.0.127.226', which differs from the customer's registered IP '10.0.106.120'. However, the device and location align with the customer's profile. An IP mismatch in isolation often has benign explanations (e.g., use of public Wi-Fi, VPN, or mobile data).

4. Risk Assessment

Overall Risk Level: HIGH

Justification: The primary driver for this high-risk assessment is Transaction 1 (TXN063). This single transaction exhibits a severe combination of high-impact anomalies: a confirmed device mismatch (unregistered device), a significantly high transaction amount above the set threshold, and concurrent IP and location mismatches. These factors, particularly the use of an unregistered device for a high-value transaction from an unusual geographic location, collectively present a strong pattern indicative of potential fraud, such as account takeover, SIM swap fraud, or unauthorized access via phishing. The system's assigned risk score of 10/10 for TXN063 strongly corroborates this assessment.

While Transaction 2 (TXN076) has a low individual risk score of 2/10 and only one medium-severity IP mismatch, its context is secondary to the immediate and severe concerns raised by TXN063. The isolated IP mismatch in TXN076 would typically warrant less concern, but given the potential compromise indicated by TXN063, it should be noted.

5. Investigation Outcome

SUSPICIOUS

6. Recommended Actions

1. Immediate Customer Contact: Contact Simran Malhotra via her registered phone number (9528414718) without delay.

Verify the legitimacy of TXN063 (Rs. 84,193.01 to PhonePe Merchant on 2025-04-26 at 10:41:25 from Patna).

Inquire about her presence in Patna or if she authorized anyone to initiate this transaction using a different device.

If TXN063 is confirmed unauthorized, advise her to change her UPI PIN immediately and report any other suspicious activity.

2. Temporary Account Restriction: Pending customer verification, temporarily restrict high-value UPI transactions or place a hold on the UPI ID (simran53@okicici) to prevent further potential unauthorized debits, especially if the customer cannot be reached promptly.

3. Enhanced Fraud Monitoring: Place Simran Malhotra's account (57871331509) under enhanced fraud monitoring for at least the next 72 hours to detect and immediately flag any further unusual or suspicious transactions.

4. Internal Fraud Alert: Raise an internal fraud alert, documenting all findings and actions taken. This will ensure relevant teams are aware and contribute to broader fraud prevention intelligence.

5. Review of TXN076 (Conditional): If TXN063 is confirmed fraudulent, review TXN076 again to see if the IP mismatch is part of a pattern of external access, even if the device was registered. If TXN063 is confirmed legitimate, TXN076 can

ClearTrace Investigation Report

likely be dismissed as a benign IP change.

7. Reasoning

The determination of "SUSPICIOUS" is overwhelmingly driven by the confluence of critical anomalies in Transaction 1 (TXN063). The simultaneous occurrence of a High-severity DEVICE_MISMATCH (transaction device 'DEV61773' vs. registered 'DEV96374'), a High-severity HIGH_AMOUNT (Rs. 84,193.01, significantly exceeding the Rs. 50,000 threshold), and Medium-severity IP_MISMATCH ('10.0.8.98' vs. '10.0.106.120') and LOCATION_MISMATCH (Patna vs. Bhopal) paints a clear picture of potential unauthorized activity.

It is highly improbable for a legitimate customer to initiate such a substantial transaction from an unregistered device, a foreign IP address, and a geographically distant location at the same time. This pattern strongly indicates either that the customer's UPI credentials or device have been compromised, or that a SIM swap has occurred, allowing a fraudster to initiate transactions. The system's maximum risk score of 10/10 for this transaction provides robust validation for this conclusion.

While Transaction 2 (TXN076) presents an IP mismatch, its lower amount, registered device usage, and aligned location, along with its low risk score of 2/10, suggest it is likely benign in isolation. However, the severity of TXN063 necessitates a proactive and thorough investigation, as it suggests a direct threat to the customer's funds and account security. The recommended actions are designed to promptly ascertain the transaction's legitimacy, protect the customer from further potential losses, and reinforce account security measures.
