AI Investigation Analysis

Investigation Report: Flagged UPI Transactions
To: Head of Fraud & Risk Management Department
From: Senior Banking Investigation Officer
Date: 2025-06-25 (Current Date for Report Generation)
Subject: Investigation Report ? Flagged UPI Transactions for Customer Simran Malhotra (UPI ID: simran53@okicici)

1. Case Summary

This report details the investigation into two flagged UPI transactions originating from the account of Ms. Simran Malhotra (Account: 57871331509) at IndusInd Bank, Bhopal MG Road Branch. The flagging system detected significant anomalies, particularly with Transaction ID TXN063, which exhibited multiple high-risk indicators suggesting potential unauthorized activity or fraud. The total account balance currently stands at Rs. 464,812.18.

2. Data Analyzed

The following data points were thoroughly examined:

Customer Profile: Name (Simran Malhotra), Age (37), UPI ID (simran53@okicici), Bank (IndusInd Bank), Account Number (57871331509), IFSC (INDB0199), Branch (Bhopal MG Road Branch), Phone Number (9528414718), Registered Device (DEV96374), Registered IP (10.0.106.120), Account Balance (Rs. 464,812.18), Total Transactions (396), Account Opening Date (2022-09-09).

Flagged Transaction 1 (TXN063): Amount (Rs. 84,193.01), Merchant (PhonePe Merchant), Time (2025-04-26 10:41:25), Location (Patna), Device (DEV61773), IP (10.0.8.98), Risk Score (10/10), and associated anomalies.

Flagged Transaction 2 (TXN076): Amount (Rs. 10,983.59), Merchant (MakeMyTrip), Time (2025-06-25 05:10:00), Location (Bhopal), Device (DEV96374), IP (10.0.127.226), Risk Score (2/10), and associated anomalies.

3. Detected Inconsistencies

The analysis revealed several critical inconsistencies:

Flagged Transaction 1 (TXN063) - Risk Score 10/10:

[HIGH] DEVICE_MISMATCH: The transaction was initiated from device 'DEV61773', which is different from Ms. Malhotra's registered device 'DEV96374'. This indicates a strong possibility of an unknown or unauthorized device being used.

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.8.98', which is different from the customer's registered IP address '10.0.106.120'. While IP addresses can change, a significant deviation without corresponding device match is suspicious.

[HIGH] HIGH_AMOUNT: The transaction amount of Rs. 84,193.01 significantly exceeds the internal threshold of Rs. 50,000 for a single UPI transaction, warranting extra scrutiny.

[MEDIUM] LOCATION_MISMATCH: The transaction occurred in 'Patna', which is geographically distant from the customer's registered branch location in 'Bhopal'. A sudden high-value transaction from a new, distant location is a significant red flag.

Flagged Transaction 2 (TXN076) - Risk Score 2/10:

[MEDIUM] IP_MISMATCH: The transaction originated from IP address '10.0.127.226', which differs from the customer's registered IP address '10.0.106.120'. While the device (DEV96374) and location (Bhopal) match, this IP change still warrants clarification.

4. Risk Assessment

The overall risk level for this case is assessed as HIGH.

ClearTrace Investigation Report

Generated: 2026-03-07 20:20:35

The primary driver for this high assessment is Transaction TXN063. The simultaneous occurrence of a device mismatch, an IP mismatch, a location mismatch (Patna vs. Bhopal), and a high transaction amount (Rs. 84,193.01) creates a highly suspicious pattern indicative of potential account takeover (ATO) or unauthorized access. Such a combination of anomalies rarely occurs during a legitimate transaction by the registered user. The risk score of 10/10 assigned by the system for TXN063 accurately reflects this severe threat.

Transaction TXN076, while less critical on its own (only an IP mismatch), adds to a pattern of IP changes which, in conjunction with TXN063, requires clarification from the customer.

5. Investigation Outcome

SUSPICIOUS

6. Recommended Actions

Based on the investigation outcome, the following immediate and subsequent actions are recommended:

1. Immediate Suspension of UPI Services: Temporarily suspend UPI transaction capabilities for Ms. Simran Malhotra's account (57871331509) to prevent any further potential unauthorized transactions.
2. Customer Contact: Immediately contact Ms. Simran Malhotra at her registered phone number (9528414718) to verify the legitimacy of TXN063 and TXN076.

Specifically inquire about her activities on 2025-04-26 at 10:41:25, asking if she made a PhonePe Merchant transaction of Rs. 84,193.01, if she was in Patna, and if she used a different device (DEV61773).

Inquire about the MakeMyTrip transaction (TXN076) on 2025-06-25 at 05:10:00 and the change in IP address.

3. Account Monitoring: Place Ms. Malhotra's account under enhanced monitoring for any other unusual activity.
4. Internal Fraud Alert: Raise an internal fraud alert for this case and inform the Bhopal MG Road Branch of the suspicious activity.
5. Further Investigation: If Ms. Malhotra denies initiating TXN063, initiate a formal fraud investigation, including:
Requesting the merchant details from PhonePe for TXN063.

Analyzing other recent transactions for similar patterns or suspicious beneficiaries.

Providing Ms. Malhotra with steps to secure her UPI ID and banking credentials.

6. Device & IP Whitelisting Review: Advise the customer to review and update her registered device and IP details if she frequently travels or uses different network connections, after confirming the legitimacy of her recent activities.

7. Reasoning

The decision of "SUSPICIOUS" is primarily driven by the confluence of high-risk anomalies observed in Transaction TXN063.

TXN063's Extreme Risk: A financial transaction involving a significant amount (Rs. 84,193.01), originating from an unregistered device (DEV61773), a new IP address (10.0.8.98), and a completely different geographical location (Patna vs. Bhopal) is an extremely strong indicator of an account takeover attempt or direct fraud. It is highly improbable for a legitimate customer to execute such a transaction without using their registered device and from a new, distant location, especially for such a large sum. This pattern strongly aligns with common fraud methodologies where fraudsters gain unauthorized access to a UPI ID and perform high-value transactions from their own devices and locations. The "PhonePe Merchant" description is also generic and often exploited by fraudsters.

TXN076's Context: While TXN076, a MakeMyTrip transaction of Rs. 10,983.59 from Bhopal using the registered device but a different IP, could potentially be legitimate (e.g., using a public Wi-Fi or VPN, or a different mobile network while travelling within Bhopal), its occurrence in the proximity of TXN063 heightens the overall concern. It points to a general instability in the customer's transactional IP, which requires clarification. However, it does not carry the same immediate threat level as TXN063 due to the device and location being consistent with the customer.

Given the severity and multiple high-risk indicators for TXN063, proactive measures are essential to protect the

customer and the bank from potential financial loss. The possibility of Ms. Malhotra's UPI credentials being compromised is very high.
